To Whom it may Concern,

Re: Letter of Recommendation for Aarav Jain,

It is my great pleasure to recommend **Aarav Jain** who participated in the Imperial's Schools STEM-a-thon India 2024 and was **awarded First Place**.

STEM-a-thon India is a national schools' competition, where teams of three students selected by their schools compete in a science challenge for prizes such as flights to London to meet the Imperial team. The topic for 2024 was to create and develop a sustainable solution to one of the UN's 17 Development Goals. In round 1 Aarav was required to showcase the team's idea in a 5-minute elevator-pitch video submission. Aarav's team's submission impressed the judges and the team progressed to the Final, a 2-day event held in Delhi. Again, Aarav Jain and his team rose to the challenge and was awarded first place at the final event following submission of a business plan and showcasing the sustainability of their solution.

Aarav is a strong speaker and expressed great clarity on the project. He stepped up during the presenatation to calmly and confidently answer the questions from the judging panel regarding the specifics of their product. This is a real testiment to Aarav's character especially working under pressure of a national final and representing his school. Aarav's on the spot responses showed a deep understanding of the topic which could only have been aquired through hard work, research and full participation during the project development period.

The prototype Aarav's team brought was very impressive. Aarav's commitment was visible in the team's presentation and he demostrated a mature business insight through such details as the branding of the project matching the style of project and prototype. Their presentation was cohesive, well-structured and the team demonstrated their efforts address all feedback given. It was clear from the flow of the speech between the team members that the presentation had been meticulously planned and practiced. The team were supportive of one another and worked seamlessly to deliver an excellent presentation. Aarav's team completed the presentation on time, which was impressive, especially with the inclusion of their prototype.

It was a pleasure to meet Aarav Jain and he thoroughly deserved to be awarded first place; I am certain he will go on to be successful in his chosen education and career journey.

Yours faithfully,

Clare Whelan
